

Backend Configuration and Data Setup architecture

SLA creation

Date	
Project name	virtual agent-driven SLA breach awareness and justification system
Team ID	SWTID-2026-4945
Maximam Marks	

Project Title:

virtual agent-driven SLA breach awareness and justification system **SLA**

Creation:

Overview

SLA (Service Level Agreement) Creation is a key activity in the **Backend Configuration and Data Setup Architecture** phase. It involves defining the service targets, response times, resolution times, priorities, and conditions that the system uses to monitor service requests. In the **Virtual Agent-Driven SLA Breach Awareness and Justification System**, SLAs serve as the foundation for tracking ticket performance, detecting potential breaches, and triggering notifications and automated justifications. **Steps Involved in SLA Creation**

1. Define SLA Objectives

- Identify the service commitments, including response time and resolution time requirements, based on business needs.

2. Create a New SLA

- Configure a new SLA by assigning a unique name, description, and applicable service category.

3. Set SLA Conditions

- Define the conditions under which the SLA starts, pauses, resumes, and stops, ensuring accurate monitoring of service requests.

4. Configure Response and Resolution Targets

- Specify the maximum allowable response time and resolution time for different priority levels.

5. Associate the Business Schedule

- Link the SLA with the configured business schedule so that SLA calculations consider only business hours and exclude holidays and weekends.
- 6. **Assign Priority Levels** ○ Configure SLA targets based on ticket priorities such as **Critical, High, Medium, and Low**, with different time limits for each.
- 7. **Activate the SLA**
 - Enable the SLA configuration so that it is automatically applied to incoming service requests that meet the defined conditions.
- 8. **Validate the SLA**
 - Test the SLA by creating sample service requests to verify that timers, notifications, and breach detection work correctly.

Benefits of SLA Creation

- Standardizes service response and resolution targets.
- Enables accurate monitoring of service requests.
- Supports automatic SLA breach detection.
- Improves service quality and operational efficiency.
- Provides a foundation for notifications, reporting, and virtual agent interactions.
- Enhances customer satisfaction by ensuring timely service delivery.
