

Virtual Agent Design and Configuration

Install Necessary Plugins

Date	
Project name	virtual agent-driven SLA breach awareness and justification system
Team ID	SWTID-2026-4945
Maximam Marks	

Project Title:

virtual agent-driven SLA breach awareness and justification system **Install**

Necessary Plugins:

Step 1: Access the Plugin Manager

Log in to the ServiceNow instance with an administrator account and navigate to **System Applications → All Available Applications → All** (or **Plugin Manager**, depending on the instance version).

Step 2: Search for Required Plugins

Use the search bar to find the plugins required for the Virtual Agent. Search for plugins such as **Virtual Agent**, **Agent Chat**, **Natural Language Understanding (NLU)**, **Flow Designer**, and **Now Assist Virtual Agent** (if AI features are used).

Step 3: Review Plugin Details

Open each plugin and review its description, features, and dependencies to ensure it meets the project requirements.

Step 4: Install the Plugins

Click the **Install** or **Activate** button for each required plugin. If dependency plugins are required, confirm their installation when prompted.

Step 5: Wait for Installation to Complete

Allow the system to complete the installation process. The installation status can be monitored until all selected plugins are successfully activated.

Step 6: Verify Plugin Activation

After installation, verify that each plugin is listed as **Active** in the Plugin Manager and is available for use within the ServiceNow instance.

Step 7: Configure Plugin Settings

Configure the basic settings of the installed plugins according to the project requirements. Enable the necessary features for Virtual Agent conversations, chatbot interactions, and workflow integration.

Step 8: Test Plugin Functionality

Perform a basic test to ensure that the installed plugins are functioning correctly. Verify that the Virtual Agent can be accessed and that the supporting features are working as expected.

Outcome:

The successful installation and activation of the required plugins provide the necessary environment for designing and configuring the **Virtual Agent-Driven SLA Breach Awareness and Justification System**. These plugins enable chatbot functionality, workflow integration, and intelligent conversation management, forming the foundation for the remaining development activities in the Virtual Agent phase.
